EDUCATION

Mentor Academy of Design, Entrepreneurship, Innovation and Technology Kerala, India
B.Tech Computer Science and Engineering (AI & DS), APJ Abdul Kalam Technological University (KTU) 2025 – 2029

EXPERIENCE

Software Development Intern Jun 2026 – Jul 2026
ThoughtMinds Technologies Hybrid

- Contributed to the development of SupportAI, an AI-powered customer support platform built using Retrieval-Augmented Generation (RAG).
- Developed backend APIs using FastAPI and Python for authentication, conversation management, and knowledge retrieval workflows.
- Implemented hybrid search using BM25 and vector similarity with Qdrant to improve response relevance and answer accuracy.
- Integrated Llama 3.1 through Groq and optimized document ingestion, chunking, embedding generation, and semantic retrieval pipelines.
- Collaborated in a 3-member Agile development team using Git, GitHub, Docker, and modern software engineering practices.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Dart, C
Frameworks: FastAPI, Flask, Django, React, Flutter, Tailwind CSS
AI & Data: PyTorch, Hugging Face Transformers, Gemini API, Groq API, RAG, Qdrant
Databases: PostgreSQL, MySQL, MongoDB, Firebase, Redis, SQLite
Tools: Git, GitHub, Docker, Linux
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

CERTIFICATIONS

- Software Engineer Certification** – HackerRank
- Python (Basic) Certification** – HackerRank

PROJECTS

SupportAI – AI Powered Customer Support Platform

Tech Stack: FastAPI, React, TypeScript, Qdrant, SQLite, Redis, Groq, Docker

- Architected and developed an AI-powered customer support platform using Retrieval-Augmented Generation (RAG), hybrid search (BM25 + vector search), and Llama 3.1 via Groq.
- Built customer chat, knowledge base management, ticket workflows, analytics dashboards, administrator review systems, and session persistence features.
- Implemented document ingestion, semantic search, vector storage with Qdrant, and enterprise-grade retrieval pipelines for accurate knowledge-grounded responses.

Flexion Flow – Tele-Rehabilitation Mobile Application

Tech Stack: Flutter, Dart, Google ML Kit

- Developed a mobile application for remote rehabilitation and physical therapy monitoring.
- Integrated Google ML Kit for real-time posture detection and movement analysis.
- Implemented intelligent feedback mechanisms and user-friendly workflows focused on accessibility and engagement.

EduVora – AI-Powered Learning Platform

Tech Stack: Flask, Firebase, Gemini API, JavaScript

- Developed an intelligent learning platform providing personalized educational experiences.
- Integrated AI-powered recommendation systems and real-time doubt-solving assistance using Gemini API.
- Built analytics dashboards and scalable backend services for learning progress tracking.

AegisSim – Distributed Disaster Response Platform

Tech Stack: Python, FastAPI, React, PostgreSQL, Redis, Docker, RabbitMQ

- Developed a distributed disaster response platform for emergency coordination and response.
- Built scalable event-driven backend workflows using FastAPI, Redis, PostgreSQL, and RabbitMQ.
- Implemented WebSocket-based communication, monitoring dashboards, and modular rescue prioritization APIs.
